## stem cell products

<https://newstemcells.stemtech.com/US/Products.aspx>

With well-publicized statements that beginning stem cells might be the panacea for every single disease and ailment that resists existing medical treatments based on surgical procedures and drug-based treatments, vocal assistance for stem cell study continuously grows louder. Proponents emphatically specify that such study can restore failing body organs because they have the capacity to "come to be nerve cells, muscular tissue cells, heart cells and all of the various other cells in the body" [1] and treat illness and various other conditions such as Alzheimer's disease, diabetes, macular weakening and even loss of sight, multiple sclerosis, Parkinson's disease and spine injuries. In the rush to validate and promote this study moral concerns such as "Do beginning stem cells represent a life, should 'extra' icy embryos developed with in vitro fertilization be made use of to develop stem cell lines, and does completion (possible for and even cures of crippling illness and conditions) validate the methods (human beginning stem cell study also if the embryo is damaged at the same time)?" [2] are brushed off. Worse yet, study has actually also been misshaped, exaggerated and/or made to promote beginning stem cell study.
